

The CADS Medical Detoxification service is for people who have a physical dependence on alcohol or other drugs (e.g. opiates, methamphetamines, benzos).

Physical dependence is when people:

- * Need to increase how much they take to get the same effect
- * Suffer physical and psychological withdrawal symptoms if they stop drinking or using drugs

Medical Detox Services can help minimize the withdrawal symptoms and provide support for people who want to stop or reduce the amount of alcohol and/or drugs they are taking.

Our Community and Home Detox team can help you at home, or visit you in the community and we have a specialist in-patient unit for people who need a safe place to stop drinking or using drugs.

For more information about what we can offer call **845 1818** and ask for the **Detox Service**
